Important guidance notes for installation:

1. When installing Lite boards ensure a minimum of 3mm to a maximum of 8mm (we recommend 5mm) is allowed between each board for drainage.
2. When installing onto waterproofing, ensure adequate spreader plates or additional padding is added between the underside of the foot plate and the waterproofing. AliDeck cannot be held responsible for penetration or damage to existing waterproofing. If unsure of application please contact us.
3. Fix all boards within a maximum span requirements allowed, (400mm on the Lite Board) do not exceed the span requirements for each type of board, please refer to the span tables on the website, contact us for further details if unsure.
4. When cutting boards to width, never cut a board less than the centre section of 30mm as the cover clip will not be able to be installed. Consider cutting the first and the last board if required to obtain the desired platform width.
5. Please ensure the decking is covered with a barrier (plywood or plastic material) once installed to prevent any third party debris, swarf or waste material from potentially damaging the surface finish.
6. If you are installing onto existing timber, please ensure you have a clear 150mm of air gap underneath the decking to ensure good airflow and to prevent heat build up.
7. Please ensure each clip is level to the next clip and in line to ensure the boards will clip down successfully.
8. Please be sure the clips are in the correct locations to avoid progressive error, we recommend you installing the first line of clips then install the first board, then install the second line of clips, (just incase an error causes issues to the next board).
9. Fixings to use are M8 Stainless Steel Bolts, Nuts and Washers, 4mm No. 8 Stainless Steel Screws and Self-Drilling Screws if required.
